BlastVac

Vacuum extraction of blasting material with high suction power

Recycling of valuable blasting material to the blasting process

Mobile or stationary vacuum systems improve availability of your blasting plant.
Wieland vacuum systems for indoor or outdoor shot-blasting applications are driven by Diesel engines or electric motors.

All systems are designed according to customer demand. Standard systems are available with a performance from 11 to 96 kW. Collected blasting material can be discharged into BigBags or into existing conveying systems.

Applications:
- Blasting material removal from scaffolds
- Recycling of blasting material
- Removal of blasting material from parts with cavities
- Cleaning of work areas
- Disposal of worn out blasting material
